

# Form Sections Overview

Last Modified on 04/19/2022 11:04 am EDT

Within [form cards](#), **form sections** refer to the secondary content groups on the **standard form canvas**. Form sections are where you can drag and drop [form elements](#) (e.g., fields, relationships, formulas).

When you [create a new form card](#), a [section](#) is automatically added within it by default. However, you can also add a new form section by clicking **+ Section** anywhere within the form canvas. From there, you can:

- Provide a section title
- Configure a section's width and center it
- Display the section as tabs or as collapsible and expandable
- Create rules to specify if the section will be visible on the form. Read more here: [Control Section Visibility](#).
