

By Leaf

Last Modified on 10/08/2020 3:52 pm EDT

When the **By Leaf** tab is selected, the data definitions are organized alphabetically by the last object type in the data definition. All definitions displayed in the **By Leaf** tab are **focus eligible**. Clicking on a definition will display the **Edit Data Definition** page, where you can **edit** or **delete** the definition.

The screenshot shows the 'Admin: Data Definitions' page. At the top right, there is a button labeled '+ CREATE DATA DEFINITION'. Below this, there are two tabs: 'By Anchor' and 'By Leaf', with 'By Leaf' being the active tab. A message states: 'The Data Definitions are grouped by the leaf Object Type, where all Data Definitions end on the same Object Type'. Below this, a section titled 'LOCATION' (with a purple 'L' icon) contains two entries: 'Location Definitions' and 'Location only'. Each entry has a 'REPORT FOCUS ELIGIBLE' button to its right.

The Data Definitions page with the By Leaf tab selected. The definitions are organized by the last object type in the data definition.
