

About Applications Overview

Last Modified on 02/12/2019 4:08 pm EST

Core is designed to help you collect and analyze data for several scenarios or circumstances. To do so, a data structure and workflow must be in place to ensure data is effectively collected, filtered, assigned, reviewed, and analyzed through one or more applications.

Applications and object type workflows control the movement of the data and are created when object types, object type groups, assessments, fields, configurable forms, and roles come together to make **activities**, which is where a user must perform a task (through an **action**) or view objects or data visualizations (through a **view**).

Access to applications and its activities is granted through a user's **role** permissions. Once permission is granted, users can view the applications and activities through the **nav bar**.

The screenshot displays the Resolver application interface. At the top, the Resolver logo is on the left, a search bar in the center, and settings and help icons on the right. Below this is a navigation bar with the following tabs: 'Incident Reporting' (selected), 'Report an Incident', 'Review Incidents', 'Investigate an Incident', and 'View Closed Incidents'. The main content area is titled 'Incident Reporting : Report an Incident'. It features a section titled 'REPORT AN INCIDENT' with a sub-header and a paragraph of instructions: 'Prior to creating an incident report, please review the Health & Safety Manual for additional information on how to report an incident and what to do in the case of an emergency.' Below this is a button labeled '+ CREATE NEW INCIDENT REPORT'. A section titled 'MORE INFORMATION REQUIRED' contains a list of four incident entries, each with a status indicator (I-6, I-7, I-13, I-19), a description (e.g., 'IC/Health Issue 2016/08/18'), and a yellow button labeled 'Additional Info Required'.

An application displaying one of its activities. Additional activities are accessible by clicking the tabs in the nav bar.
