

# Scope & Launch Requirements

Last Modified on 04/14/2022 5:47 pm EDT

Before an assessment can be launched using the scoping tool, an administrator must complete the following steps:

1. [Create](#) and configure the assessment from the administrative settings.
2. Create a [navigation form](#) using the same [focus](#) object type or [data definition](#) as the assessment.
3. Create a [standard form](#) to be used when creating the assessment, ensuring the **Name** and **Assessment Dimension properties** have been added, along with the [Open Assessment Scoping](#) action with the appropriate navigation form selected.
4. Using the form from step 3 or a similar form with the **Open Assessment Scoping** action, create a [view](#) for the assessment in the **Not Started** state (or equivalent) to allow users to return to assessments that have not yet been scoped.
5. Add the assessment to an [action](#), using the form in step 3 above to allow users to create new assessments.
6. Ensure the appropriate users' [roles](#) have been properly configured to access the assessment, actions, and views.
