

# Case Management Overview

Last Modified on 11/29/2019 3:51 pm EST

Users in the **Incident Investigator** and **Case Manager** user groups can access the **Cases** activity in Incident Management. Cases can be used to create links between multiple incidents, or to investigate a particular location or person. New cases are automatically opened in the **Draft** workflow state, then move to the **Open** state once they are active. The **Incident Investigator** and **Case Manager** can still view cases once they are in the **Closed** state.

*The Cases activity in the Incident Management application.*
