

# Version 3.3 (Security Risk Management)

Last Modified on 09/08/2021 6:38 pm EDT

*Note: The following features are not added to Security Risk Management by default. For information on adding these features to your version of the app, contact your CSM.*

## New Features

### UI Improvements

- Adjustments in form presentation have been made for the Auditor Admin and Auditor user flows. These include:
  - Adjustments to relationship tables to minimize color impact
  - Rearrangement of some fields due to feedback and previous workarounds for visual alignment
  - New simplified forms for viewing Location and Compliance Frameworks from Monitor Assessment
- Adjustments in report presentation have been made to the following reports: Incident Detail Report, Incident List Report, Open Incident List Report, Location Overview Report, Person Overview Report:
  - Rearrangement of some fields in repeating forms due to feedback and previous workarounds for visual alignment
  - All report tables that report on primary object workflow status will display colored ovals
  - Priority/Severity columns on report tables have been moved to the first column
  - Some report tables have been set to no color.
