

Email Settings Overview

Last Modified on 06/16/2022 2:46 pm EDT

The **Email Settings** feature allows administrators to generate a new email address in the system. Upon receiving an email at the newly created address, Resolver Core then generates a new object and uses that email's data to automatically populate its fields. Once created, these objects are assigned to a specific user, who can then triage the object alongside the issues, incidents, risks, etc. created both in-app and through portals.

Once an email address has been [generated](#), administrators can:

- Configure its settings by clicking the email address name
- Turn the email address on or off by toggling the adjacent  button
- Copy the email address by clicking the adjacent  button.

Admin : **Email Settings**

[+ EMAIL ADDRESS](#)

<input checked="" type="checkbox"/> Security Requests	securityrequest1234anfenfos3234@core.resolver.com 
<input checked="" type="checkbox"/> Loss Events	lossevents14125bkfgabst9342@core.resolver.com 
<input type="checkbox"/> Incident	incidents02572510bnsah04f0whf@core.resolver.com 
<input checked="" type="checkbox"/> Intake	intake3209425bgjabh9325472@core.resolver.com 

The Email Settings page.

Disabling email settings will prevent any further communications between the email submitter and Core Admin. Resolver highly recommends you never delete an email setting once it's in-use. For further guidance, please contact [Resolver Support](#).

This system-generated email address cannot be customized, but internal email address accounts can be customized to forward to this inbox. For example, setting up **newincident@yourcompany.com** to automatically forward messages to **newincident-kgzrd6lmucl7t5tn@inbound.staging.resolver.com**.
