

Add Inferred Permissions on an Object Type

Last Modified on 02/01/2019 4:45 pm EST

To add inferred permissions on an object type:

1. Click the  icon in the top bar > **Object Types** in the **Data Model** section.
2. Click the object type or enter the name of the object type in the **Search** field, then click it to display the **Edit Object Type** page.
3. [Add a role](#) to the object type.
4. Click the role in the **Roles** tab to open **Edit Role Permissions**.
5. Click the monogram, which represents the object type you're currently working in, to expand the node and reveal relationships and references saved to the object type.
6. Click a relationship or reference to show any object types associated with that relationship or reference (e.g. clicking People Involved will show the People and Employee Record object types).
7. Click an object type to place a checkmark next to it and grant inferred permissions to that object type.

The Permission Path in an object type's inferred permission settings.

8. Click **Done**, then **Continue** to confirm.

Inferred permissions can be edited by opening **Edit Role Permissions** on the object type, then selecting or deselecting the additional object types as needed.
