

Version 2.2 Release Notes

Last Modified on 07/23/2018 4:52 pm EDT

New Features

Starred Reports

It's now possible to star reports so they appear as tabs on your homepage, allowing you to quickly access important information that's relevant to you. A starred report can even be flagged as your landing page so it's the first thing you see when you log in. See the [New in 2.2: Starred Reports](#) article to watch a short orientation video.

Heat Map Colors

Additional colors are available for [heat map](#) reports. Clicking a cell when configuring the report lets you choose from light to dark shades of green, yellow, orange, and red.

Role Parameters on Reports

Administrators can apply the By Role [parameter](#) on reports, which controls the data displayed in the report and all its elements. More parameters will be available in future releases.

Assign Roles & States on Imported Objects

Administrators can now assign roles and workflow states when [importing objects](#).

Printing Improvements

Larger tables and images no longer appear cut off in printed forms or reports, headers no longer appear alone on separate pages, and table headers are repeated when a table spans more than one page.

Miscellaneous

General performance improvements.
