

Administrator (Incident Management) Overview

Last Modified on 02/18/2025 1:56 pm EST

Administrators are responsible for adding Library objects to Incident Management. Users in this group oversee the [Library](#) application to manage the reference data available to users, including locations, persons, and incident types.

The Administrator user group can create library objects only. It is not to be confused with the [Incident Management Administrator](#), who can view incident objects, or the [Core Administrator](#), who can add users.

Watch the video below for a brief overview of the Administrator user group.

Your browser does not support HTML5 video.
