

Introduction Overview

Last Modified on 02/19/2025 3:42 pm EST

Resolver Compliance Management is an application that allows organizations to apply a risk-based approach to compliance management. Most organizations purchase the app with [RCM](#), a curated library of frequently-updated compliance content. If your organization has only purchased the app, you will need to create and import your own compliance frameworks. For more information about importing frameworks, contact [Resolver Support](#).
