

Introduction to the Connect User Guide

Last Modified on 02/24/2025 4:20 pm EST

Connect is a module developed by Resolver that uses tools, called **connectors**, to pull event and device data from security systems (Lenel OnGuard and C-Cure 9000) to send to Dispatch.

Once the connectors are installed and activated, the security equipment (**devices**) being monitored by the source systems are registered in Connect so that an administrator can create rules with specific criteria and actions (Create Dispatch, Create Alarm, Create Activity, Acknowledge or Close) to specify what happens when an event that matches certain criteria is logged.
