

Email Notifications

Last Modified on 09/30/2020 6:55 pm EDT

If configured, email notifications can be sent to users once an object has moved to the next workflow state. The notification can be created one of the following templates:

- **Standard:** Advises users that there are one or more objects that require attention.
- **Assigned** Advises users that one or more objects have been assigned to them.

If required, the templates can be edited to create custom notifications. Customizations can include:

- Creating a new subject line and custom message in the body of the email;
- Inserting variables in the subject and body to provide more information about the object(s);
- Applying [Markdown formatting](#) to any custom messages in the body of the email; and
- Replacing the Resolver logo with your company's logo.
