

Administrator (Risk Management)

Last Modified on 02/18/2025 2:06 pm EST

The Administrator has access to the entire Risk Management application. This includes access to all object types with all permissions, workflow transitions, and all archived data. This user group is meant for temporary full access to the entire app and should only be assigned to users in specific situations. If you believe you should be assigned to this user group, contact [Resolver Support](#).

The **Administrator (Risk Management)** user group grants full access to the entire app. It is not to be confused with the Core Administrator, who can add users.
