

Edit Form Template

Last Modified on 04/19/2022 11:24 am EDT

If you're an admin viewing a form as an end-user (i.e., outside the admin settings), you can edit a form template by clicking the  icon at the top-right of the form, then **Edit Form Template**.

Clicking this link will display the form's [Edit Configurable Form](#) page, where you can make changes as needed. When finished, clicking the **Done** button will return you to the previous page.

The **Edit Form Template** link will **not** be visible if:

- You're not an administrator.
- You're viewing a default form (the auto-generated form that displays all the components added to an object type).
- You're viewing a default form selected in your role's [Workflow Permissions](#) for the object's current state.

The screenshot shows a user interface for workflow permissions. At the top, there are four blue buttons: 'READ' (with an eye icon), 'EDIT' (with a pencil icon), 'DELETE' (with a trash can icon), and 'MANAGE' (with a gear icon). Below these is a 'Triggers' section with a lightning bolt icon and a 'SUBMIT' button. An 'ASSIGN' button with a plus icon is highlighted with a yellow border. Below the 'ASSIGN' button is a dropdown menu with the text 'Select a default form for this state for this role' and a 'Default' option with a downward arrow.

The "Select a default form for this state for this role" dropdown menu in the workflow permissions.
