

Security Risk Team Overview

Last Modified on 02/27/2025 11:07 am EST

The security risk team is responsible for managing the app and creating the objects used during risk assessments. Users in the **Security Risk Team** user group complete the following tasks:

- Create new locations for profiling;
- Send active locations back for profiling;
- Create and profile assets;
- Create and review risks; and
- Review SRM reports.

The screenshot shows the Resolver Security Risk Management application interface. At the top, the Resolver logo is on the left, a search bar with a magnifying glass icon and a menu icon (three dots) is in the center, and settings, help, and user profile icons are on the right. Below the header, a navigation bar contains 'Security Risk Management' (selected with a dropdown arrow), 'Location Profiles', 'Asset Profiles', 'Risks', and 'Reporting'. The main content area is titled 'Location Profiles' and includes a '+ ADD LOCATION' button. Below this is a 'New Locations' section. The 'Locations - Profiled' section features a search bar and a list of three locations, each with a status 'Active' button.

Location ID	Location Name	Status
L-1	Headquarters - Riverdale Industries	Active
L-2	666 Eagle Crest Terrace, Arlington, FL	Active
L-3	4 Waywood Hill, Fort Lauderdale, FL	Active

The Security Risk Management app as displayed to a user in the Security Risk Team user group.

While members of the **Security Risk Team** user group can edit existing assets and risks, they only have read-only access to active location objects. Members of the **Security Asset Team** user group are responsible for editing locations.
