

Form Cards Overview

Last Modified on 04/19/2022 11:02 am EDT

As described in the [Form Layouts Overview](#) article, you can organize a [standard form](#) layout by using 1 Column, or by using a Left Sidebar/Right Sidebar card. But these sidebar layout options aren't the only way cards are used on forms in Resolver Core!

A form card refers to a primary group of content within a standard form canvas – either in the [Sidebar Card](#), or within the main form area. Administrators can add multiple form cards to the main form area, to help to clearly separate form content. Then you may also add form sections, which function as secondary content groups within unique form cards.

Risk Assessment Details

Define what risk categories and risks are relevant to the business and monitor them throughout the assessment.

Risk Assessment Name

Business Unit

Define & Review Assessment Scope

View risk categories that are in scope for the assessment. To add a new risk category to the assessment, you must first navigate to the library to create the risk category.

Risk Category

Unique ID	Name
RC-5.1	Financial
RC-4.1	Information Technology
RC-3.1	Legal / Compliance
RC-2.1	Operational
RC-1.1	Strategic

Form cards.

By using form cards, admins can display the form data into more distinct, visually appealing content groups than if they used form sections alone. However, [form sections](#) help to “chunk”

content within form cards. When working with form sections, it is often best to use titles and keep the section expanded. So, instead of adding collapsible sections, consider using form cards that include form sections.

Control Effectiveness

Medium

Medium: Control is not consistently effective

Issues Controls Historical Trending

Document controls or risk management activities that the organization has in place to reduce risk. To find existing controls from the control library, click **Add Existing Controls** at the bottom of the table. If a new control is required, please navigate to the library to create the control first. Once you have documented all controls, form a manual determination on the overall control effectiveness for the risk.

Unique ID	Name	Description	Control Self Assessment	Workflow State
C-74.3	System borrowing limits	System borrowing limits	Medium	Assign Control Owner
C-60.2	Travel and entertainment expenses are audited or reviewed on a sample basis.	Travel and entertainment expenses are audited or reviewed on a sample basis.	Medium	Assign Control Owner
C-52.1	Establish and distribute a standard operating and procedures manual	Establish and distribute a standard operating and procedures manual to document specific procedures.	Medium	Assign Control Owner

Card tabs and section tabs.

Forms can have tabs on both the card and section levels. Card-level tabs reduce the need for form scrolling, as they allow the admin to place content horizontally within the card. For example, forms like Incident Triage, Risk Assessment, and Control Assessment have many sections with a lot of content to manage in them. So those form type layouts would benefit from using form cards with card-level tabs.

Corporate Security Breach Location Incident Start DateTime Incident End DateTime Incident Reported DateTime Closed Date/Time

Location

Location	Primary Location	Location Reason	Location
	No	Reported Location	Headquarters - Riverdale Industries
	No	Reported Location	Headquarters - Riverdale Industries

Persons

Name	Person Involvement Type	Involvement Flags	Description	Is Employee	Linked to Master
Jose Perez	Person of Interest			No	Person
Test Person	Person of Interest			No	Person

Form sections in a card.

Functionally, card tabs work the same as [section tabs](#):

- They can be reordered between each other.
- They can adapt to existing conditional logic.
- Each card can be expanded or collapsed.
