

Reassigning Data

Last Modified on 05/28/2025 10:45 am EDT

Overview

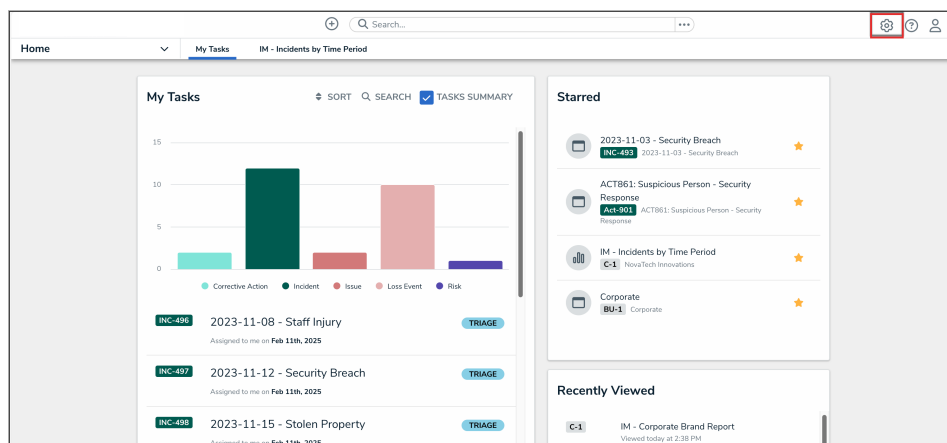

Administrators can reassign multiple objects at a time from one user to another user with the same role by importing a spreadsheet with all the necessary information into Resolver.

User Account Requirements

The user must have Administrator permissions to access the **Reassign Data** button.

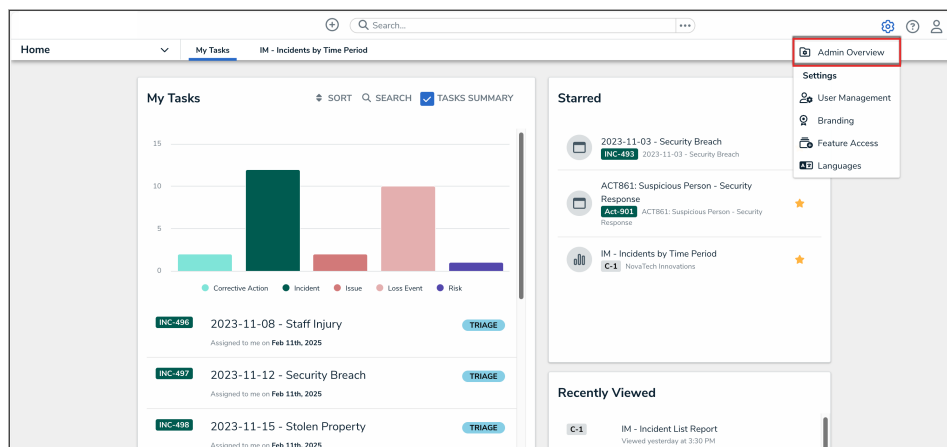

Navigation

1. From the **Home** screen, click the **Administration** icon.

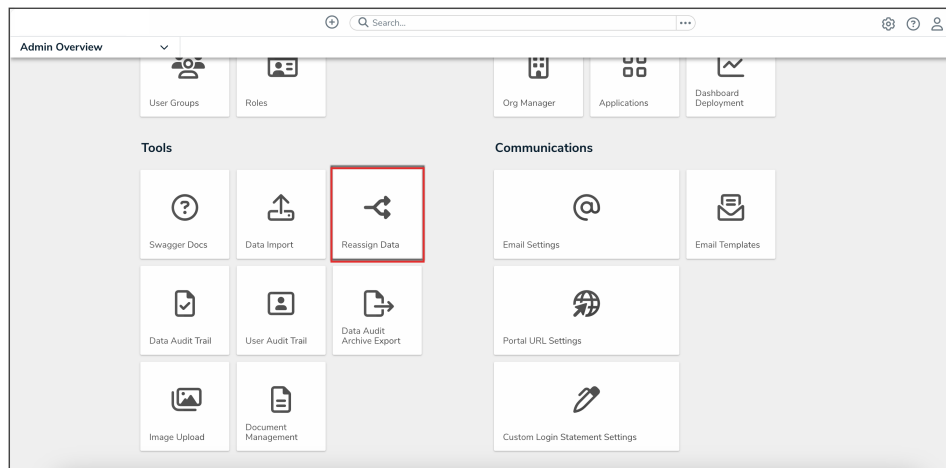

Administration Icon

2. From the **Administrator Settings** menu, click **Admin Overview**.

Administrator Settings Menu

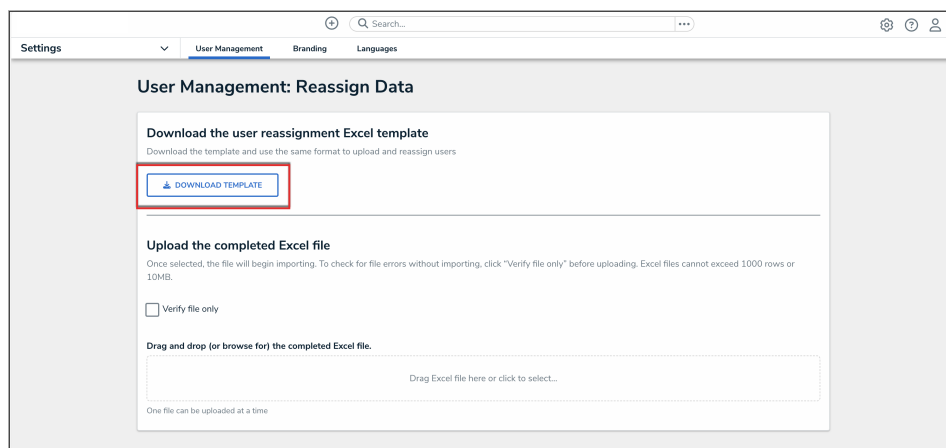

- From the **Admin Overview** screen, click the **Reassign Data** tile under the **Tools** section.

Reassign Data Tile

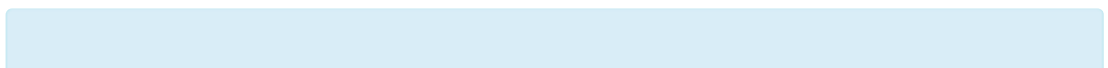

Reassigning Data

- Under the **Download the user reassignment Excel template** section, click the **Download Template** button.

Download Template Button

- Navigate to the Download folder on your PC and look for a file named **Reassign Data Template**.
- The blank template file consists of one worksheet with the following columns:
 - **External Ref ID:** The unique identifier for the object to be reassigned.
 - **Role Name:** The role on the object that needs to be update with the new assignee.
 - **Current Assignee Email:** The email address of the user currently assigned to the role on the object that needs to be reassigned.
 - **New Assignee Email:** The email address of the user to whom the role on the object will be reassigned.

Note:

The New Assignee Email must be the email address of an active user.

- The user to whom the object will be reassigned must belong to the role on the object directly or via user groups. This can be verified by checking if the user or their user group is available on the role in **Admin Overview > Data Access > Roles > [Role Name]**.

4. Fill in the necessary information and save the file to your PC.

Note:

The spreadsheet must not have more than one row with the same **External Ref ID, Role Name, and Current Assignee Email** combination.

5. Back in Resolver, under the **Upload the completed Excel file** section, click the **Verify file only** checkbox to check the data was entered correctly before uploading the file.

Note:

The spreadsheet can only include a maximum of 1000 rows.

Verify Only Checkbox

- The **Verify File Only** checkbox will perform a test import without altering your data. It shows you any existing template errors and what specific fields they're occurring on. This practice will help reduce any possible confusion and you having to review your spreadsheet line by line if errors are reported.
6. If there are no file errors detected, drag and drop the file to the upload area or click the area to find and open the file for upload.

The screenshot shows the 'User Management: Reassign Data' interface. At the top, there are tabs for 'Settings', 'User Management', 'Branding', and 'Languages'. The 'User Management' tab is active. Below the tabs, the title 'User Management: Reassign Data' is displayed. The main content area is divided into two sections. The first section, 'Download the user reassignment Excel template', includes a sub-header and a 'DOWNLOAD TEMPLATE' button. The second section, 'Upload the completed Excel file', includes a sub-header, a paragraph of instructions, a 'Verify file only' checkbox, and a red-bordered 'Import Upload Area' with a dashed line and the text 'Drag Excel file here or click to select...'. Below the upload area, it states 'One file can be uploaded at a time'.

Import Upload Area

Note:

Ensure the **Verify File Only** checkbox is de-selected before uploading.

7. If needed, correct any errors on the spreadsheet, save your changes, then re-upload the file.
8. When the upload is complete, a **Reassign Role on Object** record will appear in the **Data Audit Trail**.
