Business Continuity Management - App Summary

Last Modified on 09/11/2025 9:24 am EDT

By aligning with major standards ISO 22301, NIST 800-34, FFIEC and PS CPS-232 the following features are delivered to customers:

- Create multiple **Business Impact Analyses (BIA)** with embedded **Risk Management**.
    - Assess recovery priorities
    - Rate process criticality
    - Assess impact
    - Evaluate related risks
    - Map resources (inputs) that support processes
    - Map dependencies from your risk and compliance data
- Establish **Continuity Strategies** to manage the risks identified in the Business Impact Analysis, by documenting alternative resources (inputs), that allow critical processes to recover and continue to operate, following a disruption.
- Develop a **Plan** that documents procedures, tasks and ownership for recovering critical processes identified in the business impact analysis following a disruption.
- Validate plan effectiveness and identify areas for improvement through **Exercises** that simulate disruptions.
- Set preconditions and dependencies for Plan and Continuity Strategy **Activation**.
- **Reports & Dashboards**
    - Give the Risk or Executive Committee strategic oversight on the critical processes, impact assessments and risks identified across all business impact analyses.
    - Give the Business Continuity Team & first line roles oversight on the number of critical process and risks, coverage of continuity strategies, plans and exercises, and the number of resources and alternative resources supporting critical processes.
